

Truck Scale Kits

Perfect components for precise and legal-for-trade weight determination of road vehicles.

Regardless of what kind of demands and requirements you face, with the truck scale kits you will be able to configure the optimized feeding sequence for the loading of transport vehicles and all from one source, your weighing technology expert.

Our truck scale kits are mechanical modules, engineered to precisely determine the weights of road vehicles. The scales can be used for incoming or outgoing weight determination in industrial facilities and shipping companies or for convenient material flow management purposes, such as in waste disposal or in recycling facilities.

Depending on the requirements, we offer modules for installation or expansion or a system employing two weighing platform. The module sets are adapted to different environmental conditions, all the way up to uses in hazardous areas.

Our Solutions Package

- Load cells
- Load cell mounts
- Cable switching box
- Bumper guard plates

Option

- Over-voltage protection system

Advantages

- The components can be ordered directly from the component catalog or via the eShop
- Short delivery times
- Everything from a single source – from the weighing technology expert
- Components that are tuned to each other
