Our MULTIDOS® product range is more than just a modular feed system for any bulk solid application, it is truly multi-purpose in its ability to undertake a wide range of applications. The Schenck MechaTronic principle has been consistently implemented across the entire range. Conveyor Equipment, Sensors, Weighing Mechanics and Electronics, as well as Drive Technology, are intelligently and reliably combined in a single weighing system.

- ❖ Reliable and exact, using competence gained over years of experience.
- ❖ Particularly low in maintenance, due to lubricated-for-life components.
- ❖ Modular and process-adaptive measuring and control electronics, equipped with field-bus technology.
